THE FACTS BEHIND THE CLAIM

SEAL-LESS DESIGN FOR LEAK-FREE OPERATION

Dynamic seals are designed to leak... fact. The seals are lubricated by the pumped liquid and as they wear, so the leaks increase.

Because Hydra-Cell pumps are completely seal-less they cannot and do not leak. The pumped liquid is 100% contained. This makes for a tidier and safer work environment while reducing the cost of clean-up and completely eliminating the cost of seal maintenance and replacement.

Importantly, the Hydra-Cell seal-less design does not allow the escape of noxious and potentially harmful vapour emissions. Hydra-Cell pumps also keep greenhouse gases contained, enabling users to meet or exceed government regulations on emissions.

HYDRA-CELL[®] ... MADE TO METER
