

What happens when you're **pumping corrosive fluid**

Success Story

**How SAMOA solved a critical
problem of delayed production**

The Challenge

The highly abrasive chemicals causing considerable damage to competitor's diaphragm pumps.

Leading to significant downtime & costly pump maintenance.

The Solution

Replaced the existing pump
with our 1/2" UP05 Air-Operated
Diaphragm Pump.

The Results

- Superior performance of the pump compared to its competitors' equivalents.
- Significantly lower noise level.
- Great reduction in vibrations.
- After four months of continuous operation, the pump is working perfectly and has not required any maintenance operations.
