PERFORMANCE CURVE

Electromechanical diaphragm pumps are manufactured in two types: heavy duty type and light duty type. Light duty type diaphragm pumps are generally used where the output pressure is not desired and where the circulation is desired. It is also used as mobile with its lightweight and ergonomic structure. It also eliminates the need for an electric air compressor. And this gives the business an advantage. Thanks to the different body options, it is easily used in the following sectors.

A	B	C	D	E	F	G	H
